Yields: The Yields for the Distribution Funds are calculated by dividing an annualised distribution by the current selling price as quoted in The Financial Times.

St. James's Place Corporate Bond Distribution

Data as of 29 January 2010

Investment Objective

The fund aims to achieve an attractive level of income as well as capital appreciation over the medium to long term. To achieve this it will invest into a diversified portfolio which may include but is not limited to investment grade debt, high yield bonds and money market instruments both in the UK and Overseas. The fund will look to reduce the effect of foreign exchange rates by hedging its non UK exposure back to sterling.

Fund Commentary at 31 December 2009

Credit markets saw a modest improvement in the final quarter, when compared to the second and third quarters of 2009. Bank debt saw further improvement; Lloyds Banking Group announced a bond exchange that will see the new bonds automatically become equity if the bank's core capital falls to less than 5%. However, demand was very strong as bond holders receive enhanced coupons and certainty of payment over the next two years. Elsewhere, Barclays declared a dividend during November meaning that they must pay coupons on their subordinated bonds and the remaining US banks that had not exited the US government's Troubled Asset Relief Program announced plans to do so. New issues continue to find demand, although the number of investment grade issues coming to market has reduced as many companies have now met their refinancing needs.
